

Matrix 10

Heavy-lift tactical variant.

The Matrix 10 is the heavy-lift variant of the tactical FPV lineup. At under 2.5 lbs with 130+ mph top speed and 8 lb payload capacity, it delivers maximum effect in contested environments while maintaining full compatibility with the Matrix Architecture ecosystem. Designed for operators who need to carry heavier payloads without sacrificing speed or agility, the Matrix 10 excels in scenarios requiring extended standoff distance and increased kinetic effect. Its reinforced frame and optimized power system ensure reliable performance across extreme temperature ranges and adverse weather conditions. The Matrix 10 fills a critical capability gap for units requiring heavy-payload FPV operations without the logistical burden of larger airframes.

TECHNICAL SPECIFICATIONS

WEIGHT	< 2.5 lbs
TOP SPEED	130+ mph
PAYLOAD CAPACITY	8 lb
COMPATIBILITY	All radio & payload options
