

VTRX

Multi-mission VTOL mothership.

The VTRX is a multi-mission VTOL mothership capable of deploying and coordinating swarms of smaller tactical platforms. With tool-free setup in under 2 minutes and Swarm of Swarms capability, it extends tactical reach far beyond conventional FPV range. Operating as a forward-deployed carrier, the VTRX autonomously positions itself within contested airspace and launches coordinated waves of Matrix-series platforms to saturate target areas with persistent ISR coverage. Its modular bay system accommodates multiple airframe types simultaneously, enabling mixed-capability sorties from a single launch point. The VTRX fundamentally changes the calculus of tactical UAS employment by enabling mass and persistence at ranges previously inaccessible to small-unit operators.

TECHNICAL SPECIFICATIONS

| | |
|------------|-------------------------|
| TYPE | VTOL Mothership |
| SETUP | Tool-free, <2 min |
| CAPABILITY | Swarm of Swarms |
| COMPLIANCE | NDAA / Blue UAS Pending |
